ARMIS leads migration of SailPoint customers to Microsoft Entra

ARMIS, a leading technology company in the area of Security and Identity, has excelled in helping large organizations adopt best practices in a complex area such as identity management. As Microsoft's reference partner in the area of Security, ARMIS is currently promoting the implementation of Microsoft Entra and in particular the migration of SailPoint customers to Microsoft Entra, a modern and integrated solution for identity and governance. This strategic move aims to offer its customers a more secure, efficient and integrated platform, aligned with the highest standards of security and access management, while also enabling considerable cost savings.

94%
Of organizations have reported email security incidents.

+$20 T
The annual cost of cybercrime is estimated to exceed $20 trillion by 2026.

$10.5 T
Worldwide cybercrime costs are estimated to hit $10.5 trillion annually by 2025, emphasizing the need for enhanced cybersecurity measures.

277 days
It takes an average of 277 days for security teams to identify and contain a data breach.

The importance of migrating to Entra

In an increasingly digital and distributed business world, security and identity management are critical factors for the sustainability and growth of organizations. Companies are dealing with a growing volume of data and access, and the need to control who has access to what, when and under what conditions, has never been more pressing.

Microsoft Entra represents a significant evolution in this field, being the new generation of identity and governance services from Microsoft. It combines traditional identity management with a robust governance tool that allows companies to manage access proactively and automatically, ensuring that employees' access rights are always in line with internal policies and security standards.

ARMIS recognizes the strategic advantages of this platform and, aligned with Microsoft, is supporting companies in the transition from SailPoint to Microsoft Entra, providing a simplified and efficient process.
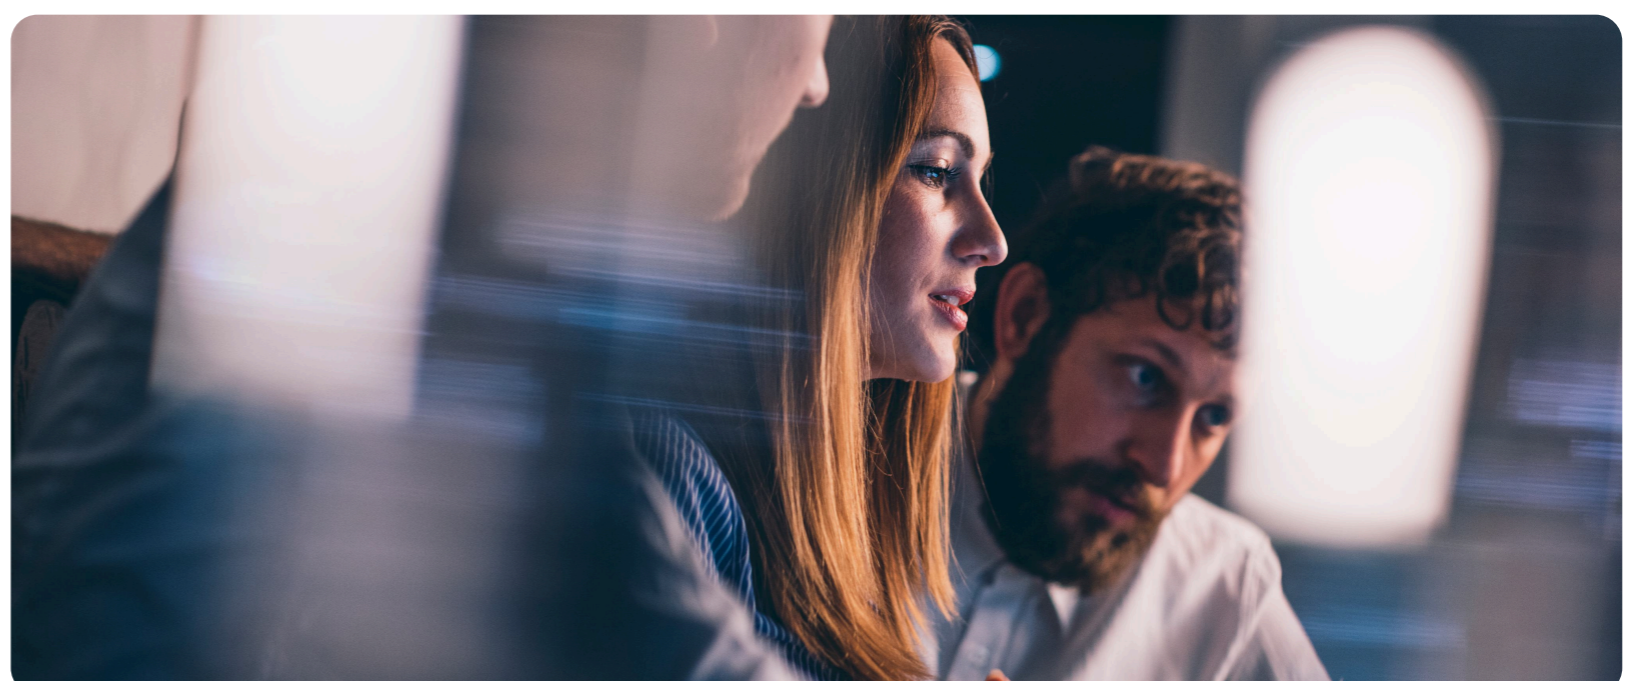

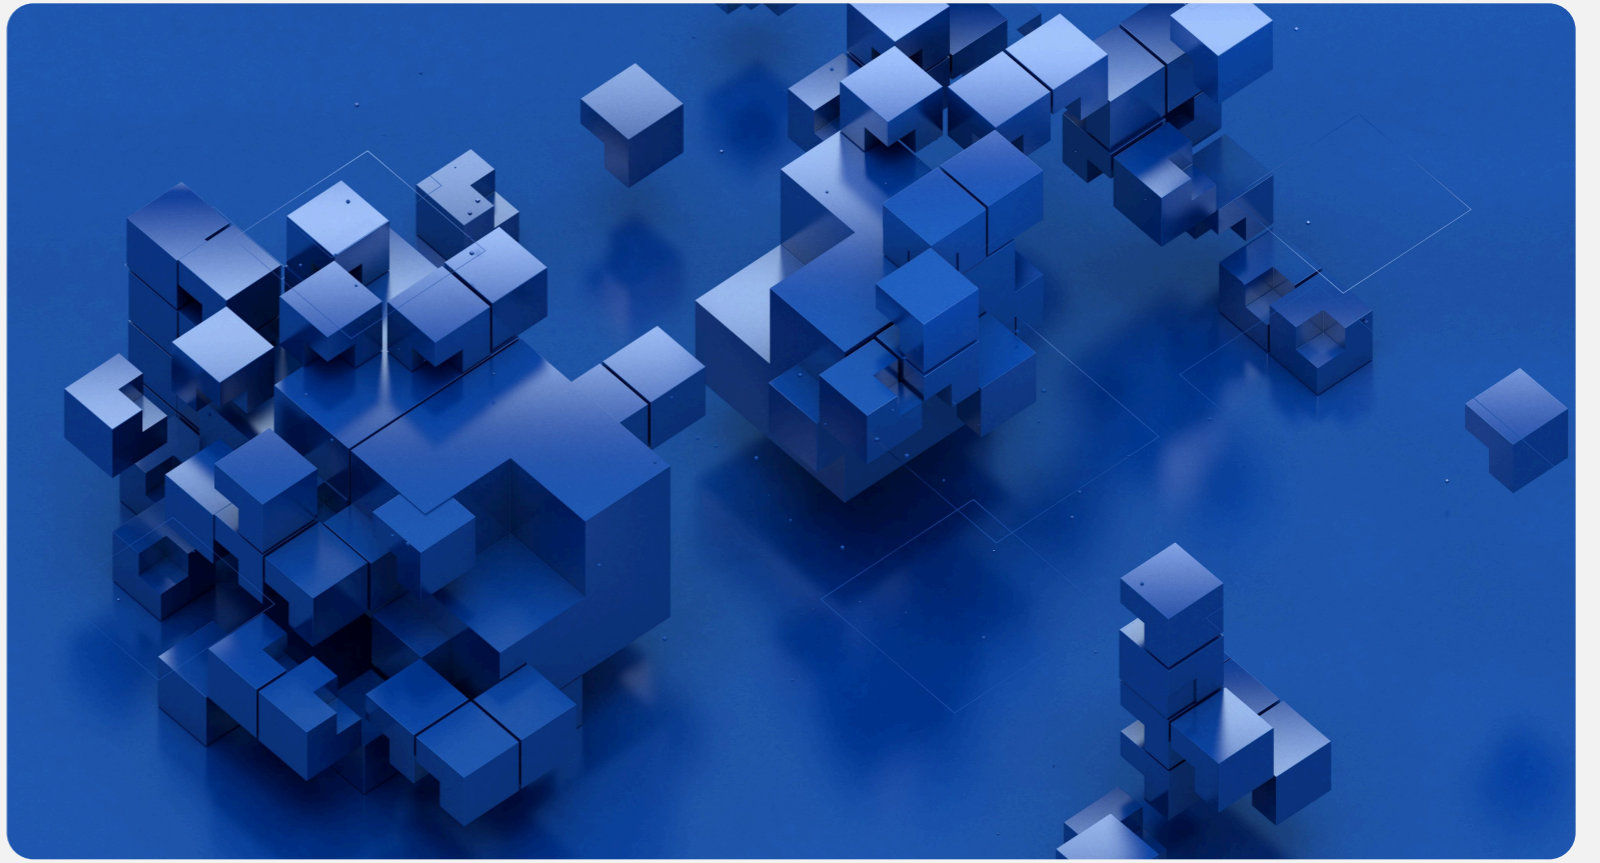

Added value of migration

Adopting Microsoft Entra offers several advantages, both technically and operationally

Native integration with the Microsoft ecosystem

For organizations that already use other Microsoft solutions, such as Entra ID or Microsoft 365, Entra ID offers fluid integration, allowing centralized and simplified management of identities.

Automation of governance processes

The platform makes it possible to automate the lifecycle of identities, ensuring that accesses are assigned appropriately and revoked when they are no longer needed, reducing the risk of improper access.

Improved security

By consolidating identity management on a state-of-the-art platform, companies can benefit from enhanced security, including real-time monitoring of risks and detection of anomalous behavior.

Scalability and flexibility

Entra is highly scalable, allowing companies to grow without worrying about technical limitations, while still maintaining strong identity governance.

Cost reduction

With an integrated and automated solution, companies can significantly reduce the operational costs associated with manual access and compliance management.

ARMIS
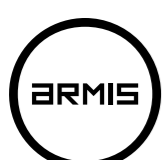

Almost 20 years of innovation

ARMIS, a global technology leader headquartered in Portugal, is dedicated to driving digital transformation. As a part of ARMIS Group, we offer innovative solutions that empower organizations to thrive in the digital era.

With clients in a variety of sectors and markets, ARMIS stands out for its ability to implement cutting-edge solutions that enable companies to remain competitive and secure in an ever-changing digital environment. The partnership with Microsoft on this migration project is further proof of ARMIS' commitment to providing its customers with the best technological tools available.

The migration of SailPoint customers to Entra represents a strategic step for ARMIS and for companies looking for more efficient and secure identity management. In a global scenario where cybersecurity is a growing priority, adopting solutions such as Microsoft Entra puts companies in an advantageous position to protect their assets and optimize access management.

With the recognized success of its implementations in the international market, ARMIS continues to consolidate its position as a trusted technology partner, providing innovation and security to companies around the world.
